180° Wall-to-Wall Coverage

Complete coverage & flexibility to eliminate blind spots

Individual Left/Right Settings

Individual Alarm Outputs

An installation of a WXI values 2 detectors because it triggers alarm signals both left and right side individually. So it's useful for PTZ activation, direction recognition and changing detection pattern by day and night with a CP.

Individual Sensitivity Setting

Detection sensitivity can be set to High, Medium and Low by left and right switches individually.

Individual Detection Area Size

Detection distance can be easily adjusted between 2.5m(8ft) and 12m(40ft) by left and right sliding lower PIR units individually.

Reliability

Self-Learning IR Digital Anti-Masking Function

WXI detects covering objects on lens surface. IR digital anti-masking function optimizes trigger level of trouble outputs generated by masking depends on status of lens surface. A well-calibrated adjustment for both of emitting and receiving level of IR LED fluctuating by temperature contributes to stable anti-masking.

Sunlight canceling

The trigger level of anti-masking is automatically adjusted when sunlight is too strong.

Rainwater and insect canceling

Small objects such as a spider or rainwater can be cancelled.

AND Logic Function To Reduce False Alarms

WXI only triggers an alarm signal when both upper and lower detection areas detect movement.

SMDA Logic (Super Multidimensional Analysis)

It can differentiate among various noise factors such as climate changes and vegetation sways and genuine intrusions.

Easy And Flexible Detection Area Settings

Area Masking Shutter

By rotary sliding area masking shutter, the size of detection areas can be changed.

When area masking shutter's position is that Left is d and right is k, detection area a-d and k-n are masked.

Area Masking Plate

Unwanted detection areas can be masked by optional area masking plate (MKP-01).

When a MKP-01 is set on position h, detection area h is masked.

Mechanical Features

EOL module socket (WXI-ST, AM only)

Optional EOL (end of line) resistor modules are available.

Wide LED window

Wide and bright LED for a recognition from a distance.

Screw free design

You can open / close front cover and remove / put main unit without any screws. It contributes to reduction of installation time

Easy open

Remove / put main unit

Auto lock

Back tamper

A tamper output is generated when unit is removed from the wall.

Pole mount plate (option PMP-01)

Suitable for a metal band up to 23 mm (1 inch) in width.

Applications

For residential

For rooftop

For substation
